The Global Leader
in High Performance Bearing Solutions

an EnPro Industries company

The Global Leader in High Performance Bearing Solutions

Setting the industry standards as the global leader in high performance bearing solutions, GGB is dedicated to supplying customers worldwide with both standard and customized plain bearings. With over 1,100 employees globally, GGB's dedicated team of experts has the experience and expertise to provide innovative, reliable and effective solutions.

GGB's wide choice of product materials includes metal-polymer, solid polymer, filament wound, metal bearings, bushing blocks and thrust plates as well as specialized housings and assemblies all available in standard or custom sizes and shapes, and manufactured to precise specifications. Application experts work alongside our customers from start to finish, assisting in the design, material selection, testing, manufacture, assembly and installation to find the ideal bearing solution for even the most challenging applications.

Our products are used in tens of thousands of critical applications every day on our planet. It is always our goal to provide superior, high-quality solutions for our customers' needs, no matter where those demands take our products. From space vehicles to golf carts and virtually everything in between; we offer the industry's most extensive range of high performance, maintenance-free bearing solutions for a multitude of applications:

- Aerospace
- Agricultural
- Automotive
- Compressors
- Construction
- Oil & Gas
- Energy
- Fluid Power
- General Industrial
- Primary Metals
- Recreation

The GGB Advantage

Lower System Cost

GGB bearings reduce shaft costs by eliminating the need for hardening and machining grease paths. Their compact, one-piece construction provides space and weight savings and simplifies assembly.

Low Friction, High Wear Resistance

Low coefficients of friction eliminate the need for lubrication, while providing smooth operation, reducing wear and extending service life. Low friction also eliminates the effects of stick-slip or “stiction” during start up.

Maintenance-Free

GGB bearings are self-lubricating, making them ideal for applications requiring long bearing life without continuous maintenance, as well as operating conditions with inadequate or no lubrication.

Environmental

Greaseless, lead-free GGB bearings comply with increasingly stringent environmental regulations such as the EU RoHS directive restricting the use of hazardous substances in certain types of electrical and electronic equipment.

Customer Support

GGB’s flexible production platform and extensive supply network assure quick turnaround and timely deliveries. In addition, we offer local applications engineering and technical support.

Trademarks

GGB®, DP4®, DP4-B™, DU®, DU-B™, DP10™, DP11™, DP31™, DX®, DX®10, HI-EX®, DTS10®, DS™, EP®, EP®12, EP®22, EP®43, EP®44, EP®63, EP®64, EP®73, EP®79, FLASH-CLICK®, KA™Glacetal, Multilube™, GAR-MAX®, SBC™, GAR-FIL™, HSG™, MLG™, HPMB®, HPM™, HPF™, MEGALIFE, Multifil™, SICAL®3, SICAL®3D, PICAL®2, PICAL®3, GGB-CSM®, GGB-CBM®, GGB-SZ™, DB™, SY™, SP™, UNI™ and MINI™ are registered trademarks or trademarks, as the case may be, of GGB and its affiliates.

The Highest Standards in Quality

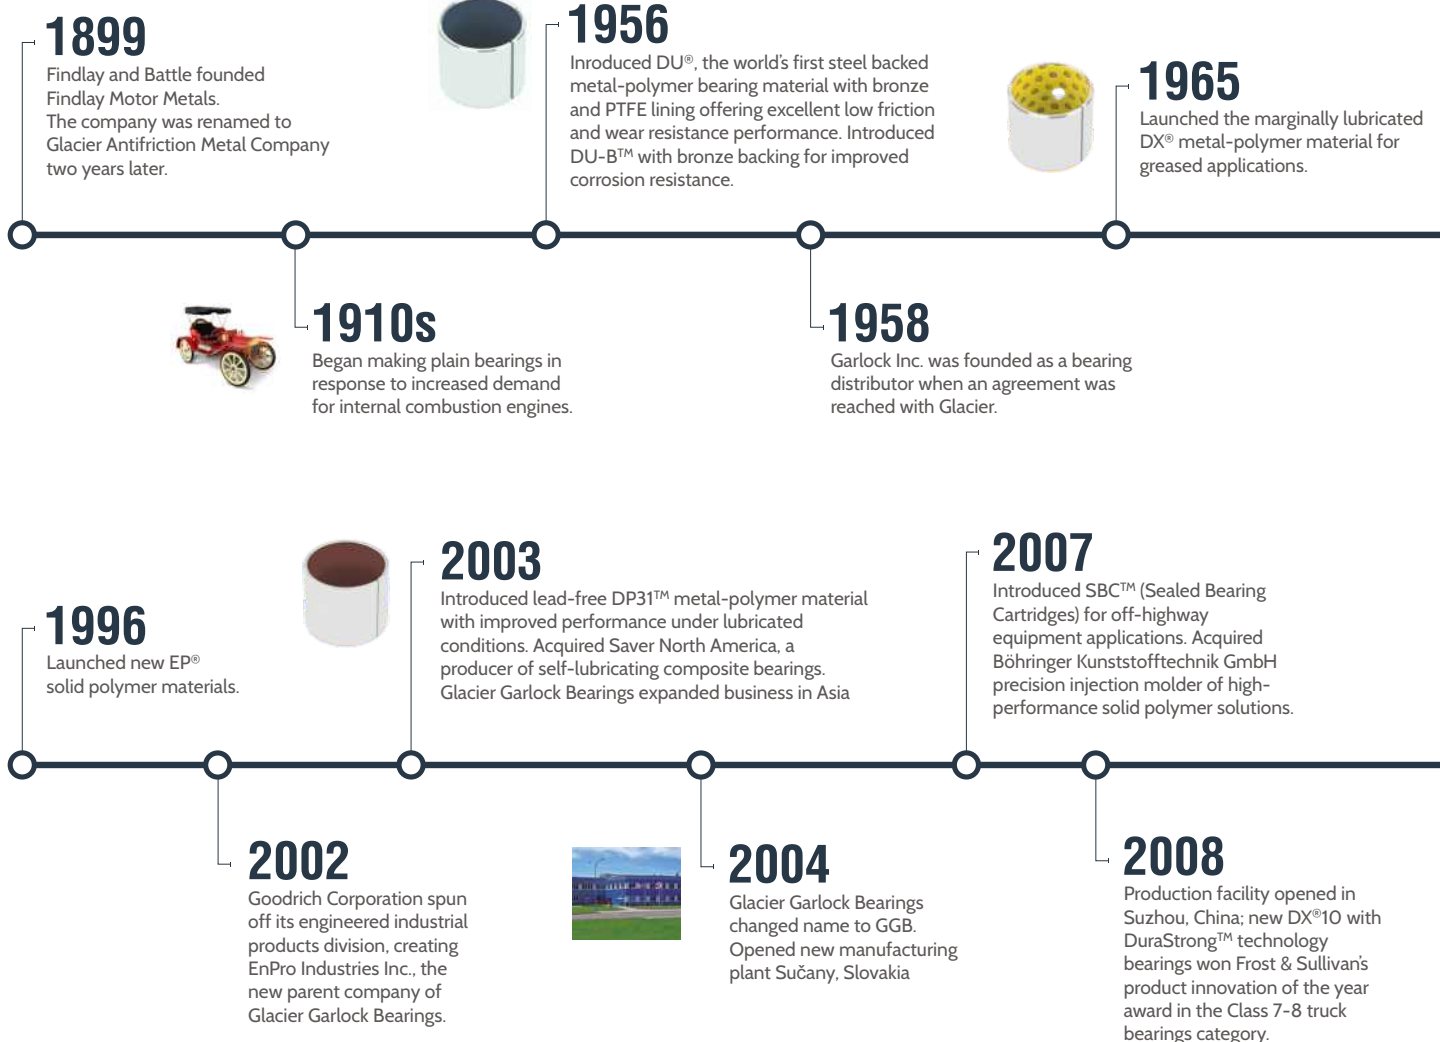

Our world-class manufacturing plants in the United States, Brazil, China, Germany, France and Slovakia are certified in quality and excellence according to ISO 9001, TS 16949, ISO 14001, ISO 50001 and OHSAS 18001. This allows us to access the industry's best practices while aligning our management system with global standards.

For a complete listing of our certifications, please visit our website:
www.ggbearings.com/en/company/certificates

A Long History of Innovation

From our modest beginnings over 115 years ago, GGB grew through innovation and technical expertise to become the world's leading manufacturer of plain bearing solutions.

1974

Began continuous casting of the SICAL® range of aluminum alloys and high precision machining of bushing blocks in Dieuze, France.

1978

Introduced filament wound product range in the USA, including GAR-MAX®.

1995

Introduced lead-free steel backed DP4® metal-polymer material for automotive shock absorbers and other hydraulic applications. Introduced DP4-B™ with bronze backing for improved corrosion resistance.

1970s

Glacier licensed technology to a number of overseas bearing manufacturers. Licenses included: SIC (France), Garlock Bearings (USA).

1976

Glacier and Garlock Inc. established joint venture company Garlock Bearings Inc.

1986

Launched HI-EX® metal-polymer material, designed for high temperature applications.

2009

Filament-wound product range introduced to the European and Asian markets; GGB North America certified to AS9100B, the aerospace industry's standard for quality management systems.

2011

Acquired PI Bearing Technologies, now GGB Chicago, a producer of PICAL® aluminum alloy bushing blocks for demanding fluid power applications. GGB plants certified to OHS18001 for health and safety management systems.

2013

Launched new self-lubricating metallic bearing materials GGB-CSM® and GGB-CBM® as well as FLASH-CLICK® two-piece, double-flanged solid polymer bearings.

2010

Introduced lead-free DP10™ and DP11™ metal-polymer materials for superior performance under marginally lubricated and dry running conditions.

2012

DTS10™ machinable metal-polymer bearings are launched for the fluid power and compressor markets. GGB bearings land on Mars aboard NASA's Curiosity rover.

2014

Series of self-lubricating sintered bronze and sintered iron bearings introduced, including GGB-BP25, GGB-FP20 and GGB-SO16.

Three plants mark milestone anniversaries: 40 years for Heilbronn, Germany and Dieuze, France and 10 years for Sučany, Slovakia.

2015

Introduced HPMB®, a fully machinable, made-to-order filament wound bearing material. Also introduced the lead-free GGB-SZ, for high specific loads with low-frequency, oscillating motion.

DP4[®] Bearing Material

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Good wear and low friction performance over a wide range of loads, speeds and temperatures in dry running conditions
- Very good performance in lubricated applications
- Good performance in greased applications
- Suitable for linear, oscillating and rotating movements
- Lead-free material compliant to EVL, WEEE, and RoHS specifications
- Approved to standard DIN EN 1797: 2002-02 and ISO 21010: 2004-04 (Cryogenic Vessels – Gas/Material Compatibility) for piping, valves, fittings and other components in both gaseous and liquid oxygen for up to maximum temperature of 60°C and oxygen pressure of 25 bars. Contact GGB for further details.

AVAILABILITY

Bearing forms available in standard dimensions

- Cylindrical bushes
- Flanged bushes
- Flanged Washers
- Sliding plates
- Thrust washers

Bearing forms made to order: Standard forms in special dimensions, half-bearings, special shapes obtained by stamping or deep drawing, bearings with locating notches, lubricant holes and machined/stamped grooves, customized bearing designs

APPLICATIONS

Automotive: Braking systems, clutches, gearbox and transmissions, hinges: door, bonnet, boot, cabriolet roof tops, pedals; pumps: axialpiston, radial piston, gear and vane; seat mechanisms, steering systems, struts and shock absorbers, wiper systems, etc.

Industrial: Aerospace, agricultural equipment, construction equipment, food and beverage, material handling equipment, forming machines: metal, plastic and rubber; office equipment, medical and scientific equipment, packaging equipment, pneumatic and hydraulic cylinders, pumps and motors, railroad and tramways, textile machinery, valves, etc.

* Depending on operating conditions

DP4-B™ Bearing Material

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Good wear and low friction performance over a wide range of loads, speeds and temperatures in dry running conditions
- Very good performance in lubricated applications
- Good performance in greased applications
- Suitable for linear, oscillating and rotating movements
- Bronze back offers improved corrosion resistance in humid/saline environments
- Lead-free material compliant to EVL, WEEE, and RoHS specifications

AVAILABILITY

Bearing forms available in standard dimensions

- Cylindrical bushes
- Flanged bushes
- Sliding plates

Bearing forms made to order: Standard forms in special dimensions, thrust washers, flanged thrust washers, half-bearings, special shapes obtained by stamping or deep drawing, bearings with locating notches, lubricant holes and machined / stamped grooves

APPLICATIONS

Industrial: Aerospace, agricultural equipment, construction equipment, material handling equipment, forming machines - metal, plastic and rubber; office equipment, medical and scientific equipment, packaging equipment, pneumatic and hydraulic cylinders, pumps and motors, railroad and tramways, textile machinery, valves, etc.

Others: Civil engineering, marine and offshore equipment, other applications in water or in outdoor environments, etc.

DP11™ Bearing Material

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, flanged bushes, thrust washers, flanged thrust washers, sliding plates, half-bearings, special shapes obtained by stamping or deep drawing, customized bearing designs

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Very good wear and low friction performance over a wide range of loads, speeds and temperatures in dry running conditions
- Particularly suited to dry applications with high frequency and low amplitude oscillating movements
- Suitable for linear, oscillating and rotating movements
- Lead-free material compliant to EVL, WEEE, and RoHS specifications

APPLICATIONS

Automotive: Belt tensioners, clutches, dual mass fly-wheels, pulley dampers, etc.

Industrial: Applications with high frequency and low amplitude oscillating movements

DP31™ Bearing Material

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, flanged bushes, thrust washers, flanged thrust washers, sliding plates, half-bearings, bearings with locating notches, lubricant holes and machined/stamped grooves, customized bearing designs

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Excellent low friction and wear resistance performance in lubricated applications
- Excellent flow erosion and cavitation resistance
- Very good fatigue strength
- Lead-free material compliant to EVL, WEEE, and RoHS specifications

APPLICATIONS

Automotive: Air conditioning compressors, gearbox and transmissions, heavy duty struts and shock absorbers, high performance pumps: axial piston, radial piston, gear, vane, etc.

Industrial: Compressors: scroll and reciprocating; pneumatic and hydraulic cylinders, high performance pumps axial piston, radial piston, gear, vane, etc.

DX[®] Bearing Material

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Marginally lubricated bearing material for grease or oil lubricated applications
- Standard parts contain grease indents in the sliding layer; plain sliding layer available by request
- Optimum performance under relatively high loads and low speeds
- Suitable for linear, oscillating and rotating movements
- Wide range of parts available from stock and liquid oxygen for up to maximum temperature of 60°C and oxygen pressure of 25 bars. Contact GGB for further details.

AVAILABILITY

Bearing forms available in standard dimensions

- Cylindrical bushes
- Thrust washers
- Sliding plates

Bearing forms made to order: Standard forms in special dimensions, half-bearings, special shapes obtained by stamping, bearings with locating notches, lubricant holes and machined grooves, customized bearing designs

APPLICATIONS

Automotive: Steering gear, power steering, pedal bushes, seat slides, king-pin bushes, tailgate pivots, brake caliper bushes, etc.

Industrial: Mechanical handling and lifting equipment, machine slides, hydraulic cylinders, hydraulic motors, ski-lifts, pneumatic equipment, medical equipment, textile machinery, agricultural equipment, scientific equipment, etc.

DX[®]10 Bearing Material

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, thrust washers, sliding plates, half-bearings, special shapes obtained by stamping, bearings with locating notches, lubricant holes and machined grooves, customized bearing designs

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Perfect for heavy duty and harsh environments
- Excellent chemical resistance
- Excellent erosion resistance
- Good fatigue strength
- Good wear performance
- Can be broached for tighter tolerance
- Lead-free material compliant to EVL, RoHS and WEEE specifications

APPLICATIONS

General: Greased or oiled applications with high load, high temperature, and contamination; ideal for replacing bi-metal or bronze bushings to achieve improved wear performance

Automotive: King pins, oil pumps

Industrial: Piston pumps, agriculture equipment, construction, lift and cranes, small reciprocating bushing

Operating Performance

Dry	Fair
Oil lubricated	Very Good
Grease lubricated	Very Good
Water lubricated	Poor
Process fluid lubricated	Fair

For Superior Performance

Dry	GAR-MAX / HSG / GAR-FIL / MLG
Water lubricated	HPF / HPM / DP4-B
Process fluid lubricated	DP4 / HI-EX / GAR-FIL

HI-EX® Bearing Material

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, thrust washers, sliding plates, half-bearings, special shapes obtained by stamping, bearings with locating notches, lubricant holes and machined grooves, customized bearing designs

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Marginally lubricated bearing material with good wear resistance under thin film conditions
- Standard bearings supplied with indents for optimum retention and distribution of the lubricant over the sliding layer
- Available with non-indented overlay for hydrodynamic applications
- Rated for high temperature use up to 250°C / 480°F
- Suitable for use with low viscosity fluids
- Good chemical resistance
- Lead-free material compliant to EVL, RoHS and WEEE specifications

APPLICATIONS

Automotive: Diesel fuel pumps, ABS equipment

Industrial: Hydraulic motors and pumps, agricultural equipment, wind energy equipment, yaw and teeter bearings

DTS10™ Bearing Material

AVAILABILITY

Bearing forms made to order: Standard forms in special dimensions, half-bearings, special shapes obtained by stamping or deep drawing, bearings with locating notches, lubricant holes and machined/stamped grooves, customized bearing designs

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- The first polymer-lined bearing for lubricated conditions offering low friction and high wear resistance that is designed to be machined on-site for tight tolerances
- Excellent wear resistance and low friction in lubricated hydraulic applications
- Excellent chemical resistance, fatigue strength, cavitation and flow erosion resistance, and good behavior in dry start-up conditions
- A minimum overlay thickness of 0.1 mm permits, under carefully controlled conditions, machining of the assembled bore for improved dimensional tolerance and reduced geometric defects, while retaining a thin layer of PTFE sliding surface
- Compatible with most standard machining processes including turning, broaching, reaming, and milling
- Lead-free material compliant to EVL, RoHS and WEEE specifications

APPLICATIONS

Industrial: Compressors: scroll and reciprocating, pumps and motors: external and internal gear, pumps, vane pumps, axial and radial piston pumps, gerotor pumps, hydraulic cylinders, etc.

DS™ Bearing Material

STRUCTURE

Metal-Polymer Composite Material

CHARACTERISTICS

- Self-lubricating bearing material for operation in mixed film lubrication conditions
- Sliding layer is machinable (ca. 0,4 mm above bronze sinter layer)
- Resistant to fretting corrosion damage to the shaft under low amplitude oscillating movements
- Similar in performance to DX® but with lower friction

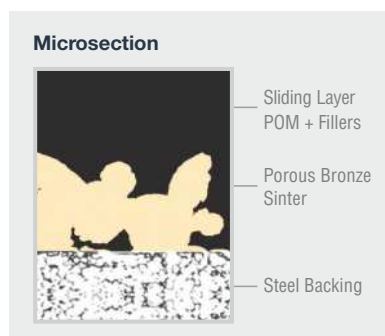

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, thrust washers, sliding plates, half-bearings, special shapes obtained by stamping, customized bearing designs

APPLICATIONS

Automotive: Steering gear, power steering, pedal bushes, seat slides, king-pin bushes, tailgate pivots, brake caliper bushes, etc.

Industrial: Mechanical handling and lifting equipment, machine slides, hydraulic cylinders, hydraulic motors, ski lifts, pneumatic equipment, medical equipment, textile machinery, agricultural equipment, scientific equipment, etc.

Bearing Properties		Units	Value
General			
Maximum load, p	Static	N/mm ²	140
	Dynamic	N/mm ²	140
Operating temperature	Min	°C	- 195
	Max	°C	205
Dry			
Maximum sliding speed, U		m/s	2,5
Maximum pU factor		N/mm ² x m/s	1,23
Coefficient of friction f			0,02 - 0,12*
Recommendations			
Shaft surface roughness, Ra		µm	≤ 0,4
Shaft surface hardness		HB	> 200

* Depending on operating conditions

HSG™ Bearing Material

STRUCTURE

Filament Wound Composite Material

CHARACTERISTICS

- High load capacity (twice as much as standard GAR-MAX® bearings)
- Excellent shock and misalignment resistance
- Excellent contamination resistance
- Very good friction and wear properties
- Good chemical resistance

AVAILABILITY

Bearing forms available in standard dimensions

- Plain cylindrical bushes

Non-standard parts made to order: Cylindrical bushes with non-standard lengths and wall thickness, flanged bearings, hexagonal and square bores, liner on outer diameter, customized bearing designs

APPLICATIONS

Industrial: Steering linkages, hydraulic cylinder pivots, king pin bearings, boom lifts, scissor lifts, cranes, hoists, lift gates, backhoes, trenchers, skid steer loaders, front end loaders, etc.

HSG™ Technical Data

HPMB[®] Bearing Material **NEW**

STRUCTURE

Fiber and Epoxy Resin Composite Material

CHARACTERISTICS

- Machinable inner and outer diameters for superior application precision, circularity and cylindricity tolerances
- Pre-machined high precision HPMB bearings available for immediate installation
- High precision through easy single point machining of the bearing liner, on-site prior to installation
- Superior precision achieved with post-installation (inner diameter tolerance IT7 attainable) single point machining of the bearing liner
- High load capacity
- Excellent shock and edge loading capacity
- Low friction with negligible stick-slip
- Low wear rate for extended bearing life
- Excellent corrosion resistance
- Dimensionally stable - very low water absorption, low swelling
- Environmentally friendly grease-free operation

AVAILABILITY

Bearing forms made to order: Finished cylindrical bushings, pre-machined cylindrical bushings, flanged cylindrical bushings (subject to design review)

APPLICATIONS

Industrial: Railroad stabilization system, railroad brake linkages, injection molding machines – guide bushings, hydraulic cylinder pivots, water turbines – wicket gates, servomotors, links, water gates, valves

SBC™ with GAR-MAX® Bearing Material

STRUCTURE

Sealed Filament Wound Composite Material

CHARACTERISTICS

- Self-lubricating
- High static load capacity
- Excellent resistance to shock loading and misalignment
- Very good friction and wear properties
- Good chemical resistance
- Sealed to exclude contaminants to offer extended service life
- Environmentally friendly and eliminates need for automated grease system and grease

AVAILABILITY

Bearing forms made to order: GGB SBC™ with GAR-MAX® sealed assemblies with or without steel outer shell, customized bearing designs

APPLICATIONS

Industrial: Steering linkages, hydraulic cylinder pivots, king pin bearings, boom lifts, scissor lifts, cranes, hoists, lift gates, backhoes, trenchers, skid steer loaders, front end loaders, etc.

SICAL[®]3 / SICAL[®]3D Bearing Material

STRUCTURE

High Strength Aluminum Alloy with Anti-Friction and Wear Resistance Properties

CHARACTERISTICS

- Suitable for use with oil lubrication
- High load capacity
- Good fatigue and wear resistance
- High mechanical strength
- Good friction
- Excellent machinability

AVAILABILITY

Bearing forms made to order: High performance engineered solutions and designs with or without assembled bearings according to customers' requirements

APPLICATIONS

Industrial & Automotive: Hydraulic external gear pumps and motors

Microsection

Aluminium Alloy

GGB-CSM[®] Bearing Material

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, flanged bushes, thrust washers, sliding plates, half-bearings, axial and radial segment rings, self-aligning spherical bearings, special shapes, customized bearing designs

STRUCTURE

Monometallic Bearing produced by Metallurgic Powder Process

CHARACTERISTICS

- Self-lubricating and maintenance-free with homogeneously distributed solid lubricant (graphite, MoS₂) in the metallic matrix
- High load capacity and temperature ranges up to 600°C possible depending on the alloy
- Corrosion resistant alloys are available
- Lead-free alloys are available

APPLICATIONS

Industrial: General mechanical engineering, applications with elevated temperatures and corrosion risk, exhaust or smoke flaps, valves, turbines, iron foundry, steel and aluminum industry, furnaces, blower, steel works and civil engineering, turbines (water, steam and gas), pumps and compressors, sewage purification plants, thermal treatment furnaces, hot rolling mills, food and beverage industry, packaging equipment, agriculture and construction machines, handling equipment, tire molds, etc.

Microsection

Solid Lubricant:

Bearing properties and recommendations depending on GGB-CSM material grade

GGB-CBM® Bearing Material

STRUCTURE

Thin Walled Bimetal Bearing produced by Metallurgic Powder Process

CHARACTERISTICS

- Self-lubricating and maintenance-free with homogeneously distributed solid lubricant (graphite) in the sliding layer
- High load capacity and suited to temperatures from -150°C up to 280°C
- Different metallic backings are available: stainless steel, carbon steel or bronze
- Lead-free alloys are available

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, flanged bushes, thrust washers, axial washers, sliding plates, half shells, axial and radial segment rings, spherical bushings, customized bearing designs

APPLICATIONS

Industrial: General mechanical engineering, applications at high loads, iron foundry, steel and aluminum industry, furnaces, blower, steel works, food and beverage industry, packaging equipment, agriculture and construction machines, handling equipment, tire molds, etc.

Operating Performance

Dry	Good
Oil lubricated	Good

GGB-BP25 Bearing Material

STRUCTURE

**Bronze Sinter Impregnated with Oil,
Similar to SINT A 50, Impregnation Group 1**

CHARACTERISTICS

- Maintenance-free bearing for general engineering applications
- Optimum performance under relatively light loads and high speeds
- Produced by powder metallurgy process and therefore suitable for complex shapes

AVAILABILITY

Bearing forms available in standard dimensions

- Plain cylindrical bushes
- Plain flanged bushes

Bearing forms made to order: Cylindrical bushes and flanged bushes with non-standard dimensions, spherical bearings, tubes and rod blanks, customized bearing designs

APPLICATIONS

Industrial: FHP motor bearings, domestic appliances and hand tools

Microsection

BP25 with composition:

Sn 8 – 10.5 %

GGB-SZ™ Bearing Material **NEW**

AVAILABILITY

Bearing forms made to order: Cylindrical bushes and sliding plates with non-standard dimensions, customized bearing designs

STRUCTURE

Bimetal Bearing with Steel Backing and Lead Free Bronze Overlay

CHARACTERISTICS

- Lead-free bearing composition with indents as reservoir for the grease, also available without indents
- High load capacity, very good resistance to fatigue strength at high temperatures
- Suited to harsh operating conditions
- Particularly suitable for high specific loads with oscillating motion and low frequency
- Fine turned shafts suitable

APPLICATIONS

Industrial: Agricultural machinery, earth-movers, textile machinery, king pin bushes, oil pump bearings, mechanical handling and lifting equipment, off highway equipment etc.

Microsection

	Oil lubricated		0,04 - 0,12
Recommendations			
Shaft surface roughness, Ra		µm	≤ 0,4
Shaft surface hardness	Normal	HB	> 200
	For longer service life		> 350

* Depending on operating conditions

DB™ Bearing Material

AVAILABILITY

Bearing forms made to order: Cylindrical bushes, flanged bushes, thrust washers, sliding plates, pintle bearings, half-bearings, axial and radial segment rings, self-aligning spherical bearings, customized bearing designs

STRUCTURE

Monometallic Bearing made from Cast Bronze with Solid Lubricant Inserts

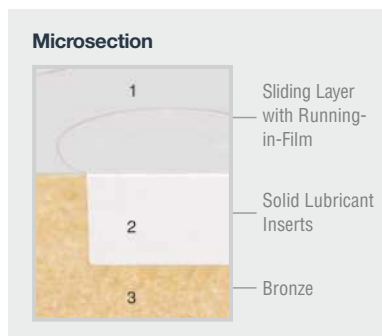

CHARACTERISTICS

- Maintenance-free bearing material for heavy duty applications
- Excellent performance under high loads and intermittent operation
- Also available with graphite inserts for temperatures above 250°C

APPLICATIONS

Industrial: Offshore industry, underwater equipment, bridges and civil engineering, iron and steel industry equipment, cranes and conveyors, deep and open cast mining equipment, construction and earthmoving equipment, etc.

DB™ Technical Data

Bearing Properties		Units	Value
General			
Maximum load, p	Static	N/mm ²	200
	Dynamic	N/mm ²	100
Operating temperature	Min	°C	- 50
	Max	°C	350
Dry			
Maximum sliding speed, U		m/s	0,5
Maximum pU factor		N/mm ² x m/s	1,5
Coefficient of friction f			0,05 - 0,18
Recommendations			
Shaft surface roughness, Ra		µm	0,2 - 0,8
Shaft surface hardness		HB	> 200

Operating Performance	
Dry	Good
Oil lubricated	Good
Grease lubricated	Good
Water lubricated	Good
Process fluid lubricated	Fair

Solid Bronze Bearing Material

STRUCTURE

Solid Bronze Alloy Bearings
According to ISO 4379

CHARACTERISTICS

- Conventional bearing material for lubricated applications in general engineering applications
- Suitable for oil and grease lubrication

AVAILABILITY

Bearing forms made to order: Cylindrical bushes with bronze alloy according to ISO 4379, special parts according to ISO, DIN or customer design, special alloys

APPLICATIONS

Industrial: Mechanical handling and lifting equipment, general and special engineering, agricultural equipment, textile machinery, automotive engineering, etc.

Microsection

CuSn12

Operating Performance

Dry	Not recommended
Oil lubricated	Good
Grease lubricated	Good
Water lubricated	Not recommended
Process fluid lubricated	Not recommended

Solid Bronze Technical Data

Bearing Properties		Units	Value
General			
Maximum load, p	Static	N/mm ²	200
	Dynamic	N/mm ²	100
Operating temperature	Min	°C	- 40
	Max greased	°C	140
Grease Lubriated			
Maximum sliding speed, U		m/s	2,5
Maximum pU factor		N/mm ² x m/s	2,8
Coefficient of friction f			0,09 - 0,15
Recommendations			
Shaft surface roughness, Ra		µm	0,2 - 0,8
Shaft surface hardness		HB	> 350

UNI™ Self-Aligning Bearing Housing

STRUCTURE

Housing Material: **GGG40**
Spherical Material: **16MnCr5**

CHARACTERISTICS

- Adjusting bearing for misalignment equalisation
- All-purpose as flange or pedestal bearing, suitable for high loads
- Self-aligning spheric avoids edge load to the bearing
- Adjustable up to $\pm 5^\circ$
- Spheric is secured against distortion
- Depending on choice of housing, spherics and bearings, simple to most demanding bearing solutions are possible
- For optimum design solutions, various bearings from the GGB product program are applicable

AVAILABILITY

Made to order

APPLICATIONS

Industrial: Wind energy plants, car washes, cleaning machines, drum systems, bevelling equipment, handling systems, conveyor belts (pulleys), printing machines, heating and ventilation equipment, hoists, cranes, textile machinery, special machine engineering, bakery equipment, marine equipment

UNI™ Technical Data

Load Limit Values for Radial Forces

Size	Bush ID	Max. Radial Load [N] (housing)	Max. Radial Load [N] (bolt)	Max. Shear Off Load [N] (bolt)
1	10 - 25	20 000	10 000	1 000
2	28 - 40	30 000	15 000	1 500
3	45 - 60	50 000	25 000	2 500
4	65 - 80	90 000	45 000	4 500
5	85 - 100	125 000	62 500	6 000

The given data for UNI bearing housings are valid for 12.9 screws (DIN EN 20898, part 1), since the housing stability exceeds the permissible load of the fixing screws.

MINI™ Self-Aligning Bearing Housing

STRUCTURE

Housing Material: **AlMgSi12**

Spherical Material: **9SMn28K**

Stainless and other materials available

CHARACTERISTICS

- Adjusting bearing for misalignment equalisation
- All-purpose as flange or pedestal bearing, suitable for high loads
- Self-aligning spheric avoids edge load to the bearing
- Adjustable up to $\pm 5^\circ$
- Spheric is secured against distortion
- Depending on choice of housing, spherics and bearings, simple to most demanding bearing solutions are possible
- For optimum design solutions, various bearings from the GGB product program are applicable

AVAILABILITY

Made to order

APPLICATIONS

Industrial: Wind energy plants, car washes, cleaning machines, drum systems, bevelling equipment, handling systems, conveyor belts (pulleys), printing machines, heating and ventilation equipment, hoists, cranes, textile machinery, special machine engineering, bakery equipment, marine equipment

MINI™ Technical Data

Load Limit Values for Radial Forces

Size	Bush ID	Max. Radial Load [N] (housing)	Max. Radial Load [N] (bolt)	Max. Shear Off Load [N] (bolt)
0	8 - 15	10 000	5 000	500

The permissible loads for MINI bearings housings are defined by the housing stability or the strength of the fixing screws (6mm diameter), depending on the load direction.

EXALIGN™ Self-Aligning Bearing Housing

STRUCTURE

Housing Material: **Cast Iron**
Spherical Material: **Cast Iron**

CHARACTERISTICS

- Adjusting bearing for misalignment equalisation
- All-purpose as flange (EXALIGN™ DF and FL) or pedestal bearing (EXALIGN™ PB), suitable for high loads
- Self-aligning spheric avoids edge load to the bearing
- Adjustable up to $\pm 5^\circ$
- Spheric is secured against distortion
- Depending on choice of housing, spherics and bearings, simple to most demanding bearing solutions are possible
- For optimum design solutions, various bearings from the GGB product program are applicable

AVAILABILITY

Made to order

APPLICATIONS

Industrial: Wind energy plants, car washes, cleaning machines, drum systems, bevelling equipment, handling systems, conveyor belts (pulleys), printing machines, heating and ventilation equipment, hoists, cranes, textile machinery, special machine engineering, bakery equipment, marine equipment

EXALIGN™ Technical Data

Load Limit Values for Radial Forces		Type PB 2-Hole Pedestal Bearing	Type FL/DF 4-Hole/2-Hole Flange Bearing
Size	Bush ID	Max. radial load (N)	Max. radial load (N)
1	10 - 15	4 250	3 750
2	20 - 25	7 700	5 900
3	30	9 500	8 000
4	35 - 40	17 000	11 000
5	45	23 000	12 000
6	50	25 000	14 500
7	55 - 60	30 000	16 000
8	70 - 75	38 000	17 000
9	80 - 85	45 500	27 000
10	90 - 100	74 500	30 500

EXALIGN™ is a product of Cryptic Avris Ltd., Leicester, UK

Special Parts Capabilities

Fully finished strip with countersinks

Slot bush with flange

FlashClick® double flange bearing

Gauge guide, deep-drawn, sliding layer outside

Ball half bearings

Special strips

Special half bearing

Special parts

In addition to our broad range of standard bearing solutions, GGB also has the capability to custom manufacture a variety of non-standard bearing configurations throughout our product range. Our materials and manufacturing engineers are available around the clock to work with our customers to identify and develop innovative solutions to their most demanding bearing challenges.

Non-standard configurations can be manufactured to any scale – even a single piece – using mono- and bimetallic, metal-polymer, solid polymer, filament wound and even turned parts.

We use a variety of techniques, including machining, stamping, water jet cutting, deep drawing and injection molding to meet our customers' requirements, typically with very short lead times and an affordable pricing structure.

As with our standard bearing solutions, non-standard components are manufactured under DIN/ISO 14001 and ISO/TS 16949 quality management systems. We can also provide factory certifications and test reports for initial samples according to customer specifications.

Contact our technical support team anytime to discuss how we can develop a non-standard bearing solution for your application.

Bearing Application Data Sheet

Not sure which GGB part fits your application requirements? Go to ggbpartfinder.com to complete a Bearing Application Data Sheet online, and one of our GGB bearing specialists will reach out to you with recommended options that meet your application requirements. You can also complete the form below and share it with your GGB sales person or distributor representative.

DATA FOR BEARING DESIGN CALCULATION

Application:

Project / No.: Quantity: New Design Existing Design

DIMENSIONS (mm)

Inside diameter	D_i	
Outside diameter	D_o	
Length	B	
Flange diameter	D_{fl}	
Flange thickness	B_{fl}	
Wall thickness	S_T	
Length of slideplate	L	
Width of slideplate	W	
Thickness of slideplate	S_s	

LOAD

Radial load static [N]	F	dynamic [N]
Axial load static [N]	F	dynamic [N]
Specific load radial [MPa]	ρ	axial [MPa]

MOVEMENT

Rotational speed	N [1/min]	
Speed	U [m/s]	
Length of stroke	L_s [mm]	
Frequency of stroke	[1/min]	
Oscillating cycle	ϕ [°]	
Oscillating frequency	N_{osz} [1/min]	

MATING SURFACE

Material		
Hardness	HB/HRC	
Surface finish	Ra [μ m]

Product Information

GGB gives an assurance that the products described in this document have no manufacturing errors or material deficiencies.

The details set out in this document are registered to assist in assessing the material's suitability for the intended use. They have been developed from our own investigations as well as from generally accessible publications. They do not represent any assurance for the properties themselves.

Unless expressly declared in writing, GGB gives no warranty that the products described are suited to any particular purpose or specific operating circumstances. GGB accepts no liability for any losses, damages or costs however they may arise through direct or indirect use of these products.

GGB's sales and delivery terms and conditions, included as an integral part of quotations, stock and price lists, apply absolutely to all business conducted by GGB. Copies can be made available on request.

Products are subject to continual development. GGB retains the right to make specification amendments or improvements to the technical data without prior announcement.

Edition 2015 (This edition replaces earlier editions which hereby lose their validity).

Statement Regarding Lead Content in GGB Products & EU Directive Compliance

GGB is committed to adhering to all U.S., European and international standards and regulations with regard to lead content. We have established internal processes that monitor any changes to existing standards and regulations, and we work collaboratively with customers and distributors to ensure that all requirements are strictly followed. This includes RoHS and REACH guidelines.

GGB makes it a top priority to operate in an environmentally conscious and safe manner. We follow numerous industry best practices, and are committed to meeting or exceeding a variety of internationally recognized standards for emissions control and workplace safety.

Each of our global locations has management systems in place that adhere to ISO TS 16949, ISO 9001, ISO 14001, ISO 50001 and OHSAS 18001 quality regulations.

All of our certificates can be found here: <http://www.ggbearings.com/en/company/certificates>. A detailed explanation of our commitment to REACH and RoHS directives can be found at www.ggbearings.com/en/company/quality-and-environment.

Fabrication

At temperatures up to 250°C the polytetrafluoroethylene (PTFE) present in the lining material is completely inert so that even on the rare occasions in which DP4[®], DP4-B[™], DP10[™] or DP11[™] bushes are drilled or sized after assembly there is no danger in boring or burnishing.

At higher temperatures however, small quantities of toxic fumes can be produced and the direct inhalation of these can cause an influenza type of illness which may not appear for some hours but which subsides without after-effects in 24-48 hours.

Such fumes can arise from PTFE particles picked up on the end of a cigarette. Therefore smoking should be prohibited where DP4[®], DP4-B[™], DP10[™] or DP11[™] are being machined.
